

# Vitamix™

## Composition and Appearance:

- Ingredients: A proprietary blend of essential vitamins (calcium pantothenate, biotin, thiamin, inositol, pyridoxine) for yeast growth and fermentation
- White powder

## Purpose:

- Helps prevent stuck or sluggish fermentations
- Promotes yeast growth, viability, and long-term survival
- Helps prevent H<sub>2</sub>S and volatile acidity formation during fermentation

## Typical Dosage Rate:

- 1 ppm (0.1 g/hL, or 4 g/1000G)
- Please note that the laws regarding the permitted use of these products vary depending on the jurisdiction. Local regulations should always be consulted with respect to specific applications and necessary declarations.

## Preparation and Use:

- Stir into water, must, or wine and then add to tank (or other container), to aid in mixing.

## General Points:

- Vitamins are not permitted to add to organic wine

## Shelf Life and Stability:

- Thiamine is very hygroscopic, so Vitamix becomes less powdery on exposure to moist air
- Keep tightly closed and at a cool temperature at all times (below 20 C if possible).
- Shelf life up to 2 years if stored dry and at cool enough temperatures; discard when yellowing occurs

## Safety Information:

- Skin and eye irritant; wear eye protection, dust mask, and coat

## GMO STATEMENT:

To the best of our knowledge and the knowledge of the supplier or manufacturer of the ingredients, no GMO's are used in the preparation or manufacture of any of our nutrient products.
