

Ultra DINGEMANS PILS™

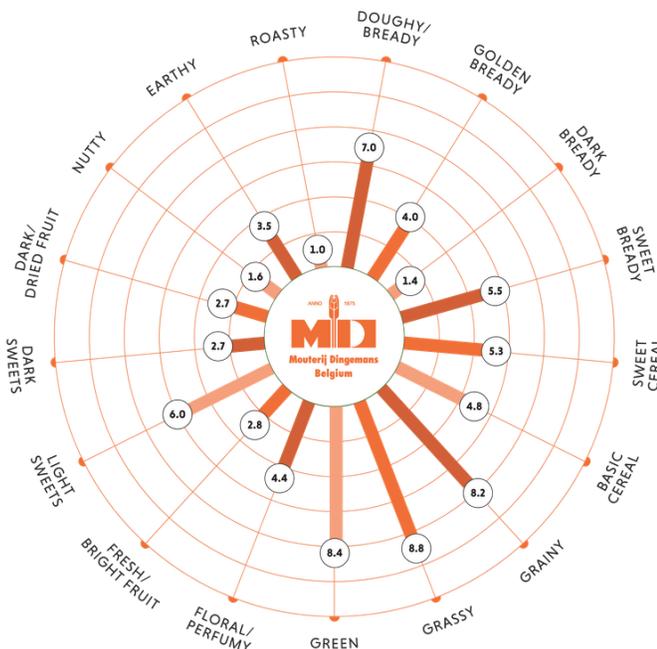

Brew brilliant pale beers with the lowest-color low pils malt available anywhere, only from Dingemans.

Developed for high drinkability and elevated hop character, Ultra Dingemans Pils is made from the same summer 2-row barley as Dingemans Pilsen but malted to a lower color spec.

Ultra Dingemans Pils is an ideal base for beer styles requiring a clean, refined, and subtle malt character—exceptional for hop-forward styles such as clear IPAs, west coast pils, or dry-hopped lagers.

Light in color and low in protein, this malt is easy to work with and delivers strong yields.

I've been using Dingemans malt since the early 2000s. In particular, I appreciate the lower protein levels, plump kernels, and full flavor of their malts.

Not only do we use Dingemans malt for our Belgian-inspired beers, but we also trust Dingemans to deliver impactful malt character in all of our lagers, including STS Pils and Velvet Glow.
